

How This Gurugram-Based Auto Parts Manufacturer Unified Operations and Finance **with Effortless**

Disconnected Tools Created Gaps and Inefficiencies

This manufacturer relied on fragmented tools for order tracking, sales analytics, and collections. The IT team faced integration issues, data mismatches, and no central visibility into order flows. These inefficiencies slowed down sales, caused revenue leakage, and made scaling harder.

Key Challenges

- ▲ Fragmented systems with no single source of truth
- ▲ Integration issues leading to mismatched order and payment data
- ▲ Limited real-time visibility into sales and collections
- ▲ Operational inefficiencies impacting IT and business teams
- ▲ High dependency on manual interventions for reporting

The Effortless Fix

Effortless gave IT one platform for **sales tracking, order management, and collections**. With **Business Health Dashboard, Tally Sync, and Role-Based Access**, the team got real-time visibility, secure workflows, and fewer manual tasks.
